A Bibliometric Analysis of Science Journals in the ISI Database.

Printed Guide to the
Microfiche Edition

Institute for Scientific Information®

Definitions

Citation	When one document (A) mentions or refers to another document (B), the latter has been cited by the former as a source of information, as support for a point of view, as authority for a statement of fact, etc. The term 'citation' is used to indicate not only the fact that document B has been cited in a reference of document A, but also the description of document B contained in the reference. In this sense, citation and reference are frequently used interchangeably.
Citation Index	The <i>Citation Index</i> is an alphabetic list, by first author, of items cited in references from footnotes or bibliographies of a source article. Each such citation is followed by a short bibliographic description of the source article which contained the cited reference.
Cited Half-Life	The number of journal publication years going back from the current year which account for 50% of the total citations received by the cited journal in the current year.
Cited Journal	A science journal cited by any journal in the <i>SCI</i> ®/ <i>SSCI</i> ®/ <i>A&HCI</i> ® database. A cited journal is not necessarily a source journal covered by <i>SCI</i> , <i>SSCI</i> or <i>A&HCI</i> . The <i>Cited Journal Listing</i> may also include as cited 'journals' non-journal serial publications.
Citing Half-Life	The number of journal publication years going back from the current year which account for 50% of the total citations given by the citing journal in the current year.
Citing Journal	A citing journal is any source journal covered in the combined <i>SCI</i> / <i>SSCI</i> / <i>A&HCI</i> database. The <i>Citing Journal Listing</i> is limited to journals covered by the <i>SCI</i> .
Immediacy Index	A measure of how quickly the 'average article' in a specific journal is cited. A journal's immediacy index considers citations made during the year in which the cited items were published. Thus, the Immediacy Index of Journal X would be calculated by dividing the number of all current citations of current source items published in Journal X by the total number of articles Journal X published that year. An article published early in the year has a better chance of being cited than one published later in the year.
Impact Factor	A measure of the frequency with which the 'average article' in a journal has been cited in a particular year. The <i>JCR</i> ® impact factor is basically a ratio between citations and recent citable items published. Thus, the impact factor of Journal X would be calculated by dividing the number of all current citations of source items published in Journal X during the previous two years by the number of articles Journal X published in those two years. There are other ways of calculating journal impact (see Garfield E. Citation analysis as a tool in journal evaluation. <i>Science</i> 178:471-79, 1972).

The impact factor is useful in understanding the significance of absolute citation frequencies. It tends to discount the advantage of large journals over small ones, of frequently issued journals over less frequently issued ones, and of older journals over newer ones. In each such case the first is likely to produce or have produced a larger citable body of literature than the second. All things being equal, the larger that body, the more often a journal will be cited. By providing some qualification of the quantitative data in the JCR®, the impact factor is an important tool for journal evaluation.

Journal Title

In the JCR, periodical titles are usually abbreviated. The JCR abbreviations exclude subtitles and title run-ons. In alphabetic listing of journals, abbreviations are alphabetized letter by letter, with a space regarded as a 'letter' preceding A and a hyphen as a 'letter' preceding A but following a space. For example, J ZOO will precede JPN HEART J and MED SCI LAW will precede MED-RIV ENC MED ITAL, while X-RAY SPECTROM will precede XENOBIOTICA.

Reference

The mention or description of one document (A) in another document (B), to indicate a source of information, to provide support for a point of view, to lend authority to some statement of fact, etc. Document B is said to make reference to document A; document A is said to be cited by document B. Reference is also used for the document description or bibliographic data given in making the reference. References are given in footnotes and in bibliographic listings at the end of an article. From such references are extracted the citations which become main-entries in the *Citation Index*.

Self-Citation

Self-citation of journals occurs when an article in a journal cites another article previously or simultaneously published in the same journal.

Self-Citation Rate

Self-citations expressed as a percentage of all citations. There are two self-citation rates, the self-citing and the self-cited rates. The self-citing rate relates a journal's self-citations to the total references it makes. For example, journal X made references to 10,000 items, including 2,000 of its own articles. Its self-citing rate is 2/10 or 20%. The self-cited rate relates a journal's self-citations to the number of times it is cited by all journals including itself. For example, journal X was cited 15,000 times by all journals, including 2,000 times it cited itself. Its self-cited rate is 2/15 or 13.3%. A journal's self-citation rate may indicate several things about its field: a high self-citation rate may mean that the field is small or isolated. Multidisciplinary journals tend to have low self-citation rates.

Source Index

The *Source Index* of the SCI®, SSCI® or A&HCI® gives a complete bibliographic description of all source items processed for the SCI, SSCI or A&HCI during a year. Items are arranged alphabetically by name of first author; co-authors are cross-referenced to first authors.

Source Item

A source item is an item published in any of the journals covered in the SCI, SSCI or A&HCI. In the JCR, only original research articles, review articles and technical notes are counted as source items.

Source Journal

This is a journal that is covered in the SCI, SSCI or A&HCI, so called because it is the source of published items processed for compilation of the four sections of the citation indexes. In the JCR a source journal is a citing journal.

-
- Times Cited:
Articles** As elsewhere in these definitions, the term 'articles' is used broadly for journal items, and includes technical communications, letters to the editor, editorials, etc. An article cited three times in the references of the same *SCI*® source item is counted as having been cited by that source item once. Thus, 'times cited' in the case of articles is the cumulative number of times the article has been cited once or more by all source items.
- Times Cited:
Authors** In the case of authors, 'times cited' is the sum of the citations of their cited items, as described above, including journal articles, books, etc.
- Times Cited:
Journals** In the case of journals, 'times cited' is a cumulation of the number of times a specific journal has been named in the different articles referenced by the source items processed for the *SCI/SSCI*®/*A&HCI*® database.
- *(asterisk):** An asterisk appears following some journal titles in the *Journal Rankings* to indicate that citation counts include a high percentage of citations to meeting abstracts.
- + (plus sign):** A plus sign appears following some journal titles to indicate that citation counts for cover-to-cover translations and original language versions of the journal have been combined.
- (small bullet):** A small bullet appears only in the *Journal Rankings*. It indicates that complete source data were not available for a particular journal before the final *JCR*® processing deadline.

KEY FIGURES FROM THE JOURNAL RANKINGS

This listing gives journal titles in alphabetic order with total citations, impact factor, immediacy index, and source items.
